JavaScript Lecture-6

What is Functions?

A JavaScript function is a block of code designed to perform a particular task.

Example

```
Document.write("Hello Students…");
Document.write("How are you");
…..
…..
Document.write("Hello Students…");
Document.write("How are you");
….
….
Document.write("Hello Students…");
Document.write("How are you");
```

AyeshaTheCoder

```
Function Myfun(){
Document.write("Hello Students…");
Document.write("How are you");
}
Myfun();
Myfun();
Myfun();
```

Syntax of a function look something like this:

```
Function myfun(){
        // Code Execute
} myfun() ;
```

➔ **Function Define**

➔ **Call a Function**

Example Function with parameters.

```
var a = 5;
var b = 10;
Document.write( a+b );

var a = 50;
var b = 20;
Document.write( a+b );
```

AyeshaTheCoder

Syntax of Function with parameters.

```
 Function myfun(parameter1 , paramerter2){
            // Code Execute
}
myfun(argument1, argument2);
```

```
Function sum(a, b){
Document.write( a+ b );
}
sum(5,10);
sum(50,20);
```

JavaScript Lecture-6 Student Task

Q1: Write a function named addNumbers() that asks the user for two numbers, adds them, and displays the sum in an alert box ?

Q2: Write a function named multiply(a, b)) that multiplies two numbers and prints the result. Call the function at least two time with different values.

Output:

If you call the function with multiply(5, 3); and multiply(10, 2); the output should be:

15

20
